## Series CWFA

## Contacting Head Watermeters

The CWFA Series of contacting head watermeters are coated cast iron bodied watermeters intended for the measurement of clean water.

Typical applications are water supplies to industrial premises, evaporative cooling tower make up, electro plating line water supply or any other piece of process plant requiring the volume water flowing in it to be accurately measured and totalised.
The method of measurement is by high sensitivity turbine impulse sender which is magnetically coupled to drive the large accurate gear train to provide both a totalisation and digital output.
The totalisation is displayed on a mechanical nonresetable counter and the digital output is by voltfree contacts proportional to the flow rate.
The reed switch provides an impulse rate factory selectable depending upon the size of water meter selected, this should be specified when ordering.

The Watermeters are of simple design \& construction designed to provide reliable, accurate and dependable measurement and control.

* Cost Effective Measurement
* Sizes From 2" to 8"
